Webinar Information

Description

After a brief review of the advantages of a code-based workflow for ecological survey data, we introduce participants to some useful tools available via the R programming language for moving data along the data life cycle. We suggest some accessible tools in R for each step of the life cycle, and conclude with a walk through of how the functionality available in R can increase the reliability, efficiency, and transparency of scientific data management.

Presenters

• McCrea Cobb (Refuge Inventory and Monitoring Program, Alaska) and Adam Smith (Refuge Inventory and Monitoring Program, Legacy FWS Region)

When

June 24, 2020 (3:00-4:30 EST)

Location

Outline

Introduction (McCrea, 5 min)

- Data life cycle review
- Manual versus code-based workflow
 - The manual data workflow
 - * Example
 - * Limitations
 - The code-based data workflow
 - * Advantages
 - · Documented
 - · Reproducible
 - · Replicable
 - · More efficient
 - · Less error-prone

Planning (McCrea, 10 min)

- Make an R project self contained and portable
 - File directory structure
 - Relative paths
- Dependency management
 - packrat
 - containers (docker)
- Standardize file naming convention
- Organizing R files (Numeric preface in the names of ordered scripts)
- Recommended RStudio settings
 - E.g., Uncheck "restore .RData into workspace at startup"
- Version control
 - Storing versions
 - Collaboration

Documenting (Adam, 10 min)

- rOxygen
- R documentation file
- Code commenting

Acquiring (Adam, 5 min)

- local and remote
- querying data
 - AGOL
 - iNaturalist
 - PRIMR web services
 - SQL query: IRIS warehouse

Processing and Analyzing (Adam, 15 min)

- Getting data into R
- QC
- Tidying data
- Visualizing
- EDA

Sharing (McCrea, 10 min)

- Reporting
 - RMarkdown
 - * Bat reporting for mobile aucistics
 - Dashboards
 - COVID 19 example
 - Shiny apps
 - * collarviewer
 - * power analysis for butterfly surveys

Archiving (McCrea, 10 min)

• Saving results to ServCat or some other data repository

An example R project / Live demo (10 min)

Questions (10 min)

Resources (Links)

Introduction to R

• An Introduction to R book

• R for Excel Users

Resources for Teaching R

- DataCamp's tidyverse course
- learnr package
- RStudio teaching resources
- Data Wrangling, Exploration and Analysis with R "STAT 545"

R Resources

- Why learn R
- What they forgot to teach you about R
- R cheatsheets
- Project-oriented workflow

Style Guides - Tidyverse style guide - DataNovia R style guide

R Packages

- Packaging your reproducible analysis
- R packages
- Packaging data analytical work reproducibly using R (and friends)

Project management

- Stop working directory insanity!
- A minimal project tree in R
- Organizing the project directory
- Designing projects
- Project management with RStudio
- File structure for data management
- Organizing files for data analysis
- A meaningful file structure for R projects
- An introduction to Docker for R users

Project Directory Templates

- MakeProject package
- rrtools package
- prodigenr package

General Coding Best Practices

- What's in a name? The concepts and language of replication and reproducibility
- Best practices for scientific computing
- Good enough practices in scientific computing
- Ten simple rules for documenting scientific software

Version Control

• Happy Git with R

Other

- $\bullet\,$ How to share your data with a statistician
- Tools for reproducible research
- Reproducibility vs. replicability: a brief history of a confused terminology
